

THREATS TO CORAL REEFS CLIMATE CHANGE

Increased greenhouse gases from human activities result in climate change and ocean acidification.

CLIMATE CHANGE = OCEAN CHANGE

CO₂

The world's ocean is a massive sink that absorbs carbon dioxide (CO₂). Although this has slowed global warming, it is also changing ocean chemistry.

CLIMATE CHANGE dramatically affects CORAL REEF ECOSYSTEMS

HOW YOU CAN HELP

Shrink your carbon footprint to reduce greenhouse gases.

Drive less.

Reduce, reuse or recycle.

Purchase energy-efficient appliances and lightbulbs.

Print less. Download more. Use less water.

Do your part to help improve overall coral reef condition.

Reduce the use of lawn and garden chemicals.

DO NOT dump household chemicals in storm drains.

Choose sustainable seafood.
www.FishWatch.gov

Learn about good reef etiquette and practice it when in the water.

Volunteer for beach and waterway clean ups.
